

# AutoHot®

DEMAND CONTROLLED  
HOT WATER RECIRCULATION SYSTEM

*Now With  
Built-In  
Wireless  
Activation!*

The most efficient hot water delivery system available today. Works on-demand, when you need it. Meets CA T24 and IECC energy code requirements.

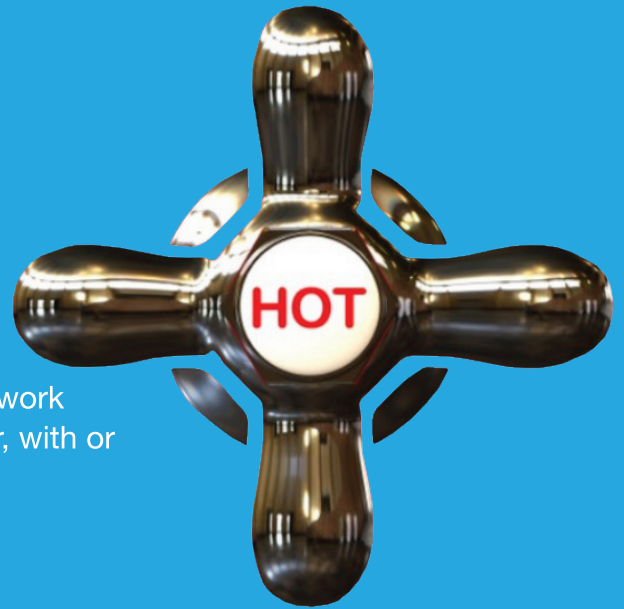

***Eliminate The Wait*** for Hot Water!

# Are You Waiting for Hot Water?

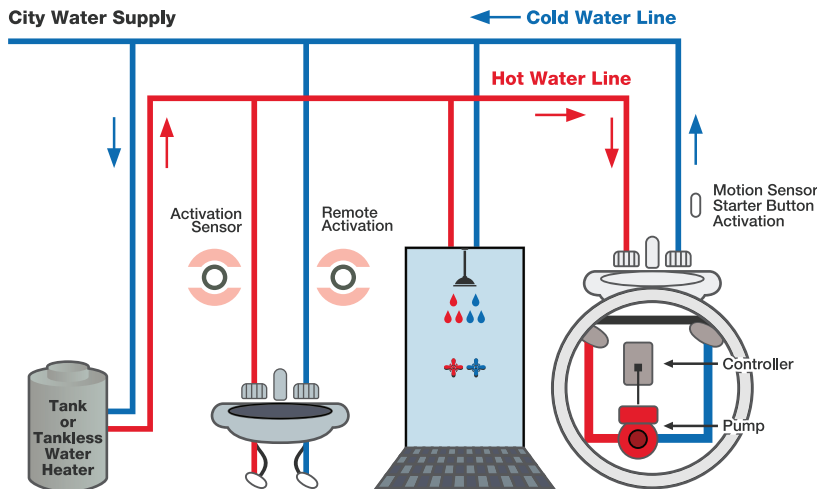

Eliminate the wait by using an on-demand recirculation system. With Enovative's **AutoHot**® System, hot water delivery has never been easier.

With flexible installation, the Enovative **AutoHot**® system will work in any situation, whether you use a tank or tankless water heater, with or without a return line, or even with an existing pump.

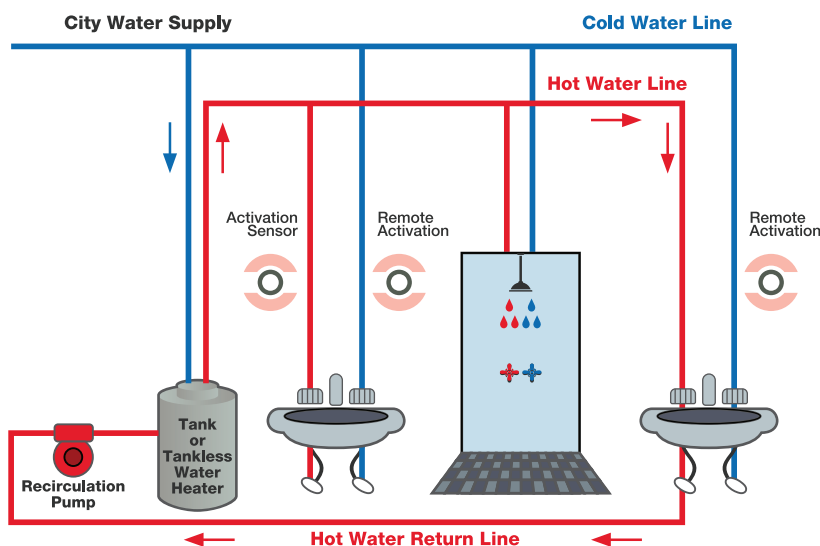

Contact us now to specify the system that works best for you!

## For use on standard plumbing (no return line)

## Or on a dedicated return line

## How it Works

Enovative's **AutoHot**® system only runs when you tell it to, and it's smart enough to know when the water in the line is hot enough.

When you activate the system by a push button or motion sensor, the pump turns on sending hot water to all the fixtures in your house. When hot water reaches the farthest end, it turns itself off automatically, saving both water and energy.

**AutoHot**® works in any plumbing situation, whether you have a dedicated return line or not, tank or tankless water heater.

# System Features

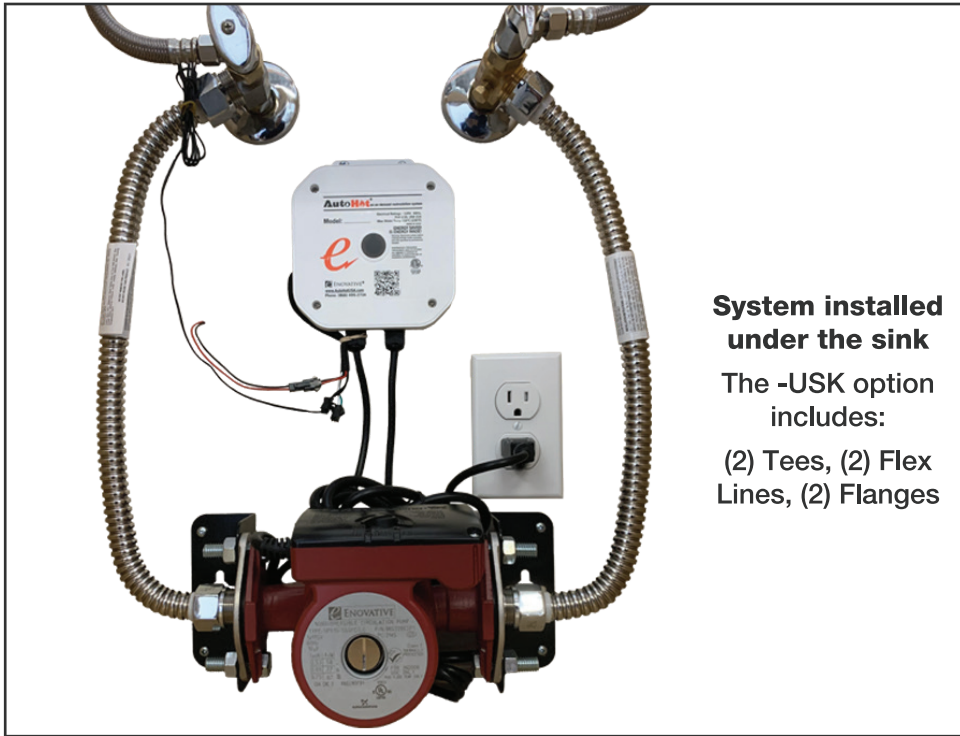

- Ultra-Quiet, 3-speed pump
- 5-year limited warranty, 15+ year life expectancy
- Many options for Activation Sensors, choose from push buttons, motion sensors, and more.
- Choose between both wired and wireless sensors
- Adjustable for absolute comfort

## Benefits of On-Demand Recirculation

- Get hot water quickly, provides the convenience of hot water on-demand
- Saves thousands of gallons of water in your home each year
- Saves energy, only operates when you need hot water
- Quick Installation whether it's a retrofit or new construction
- Works with existing plumbing tank, tankless, or heat pump water heater  
We match our system to work with yours!
